

# Strawberries: To Renovate or Not to Renovate, Who Cares?

Mary Concklin

*Fruit Production & IPM, University of Connecticut*

It is fall, and I'm writing about strawberry renovation. Bad timing? I don't think so. This is a good time to look at your fields and pat yourself on the back for a job well done, or grumble that you wished you had done your renovation.

Immediately after harvesting June-bearing strawberries, growers renovate their strawberry beds, usually by mid-July. Renovation entails mowing off the old foliage, narrowing the rows and getting rid of runners in the walkway, getting rid of weeds and fertilizing.

The reasons for each step are important and necessary for healthy plants and high quality yield the following year.

- Mowing off the old foliage. During the growing season foliar diseases, such as the many fungal leaf spots and bacterial angular leaf spot, attack the plants reducing functional leaf surface. This won't kill the plants but does have the potential to reduce yield. Mowing removes the diseased foliage, shredding it for rapid decomposition which results in reduced inoculum for the following season. It also knocks down foliar insect pests including mites. Importantly, this practice encourages new vegetative growth, opens up the plant to better sunlight penetration for flower bud formation. It is important to avoid hitting the crown with the

Renovated strawberry bed in early fall.

mower. The crown is the heart of the strawberry plant where new runners and flower stalks are produced.

- Narrowing the rows.

Till or cultivate to narrow the row to 8" - 12". This also has the benefit of putting additional soil up around the plant crown resulting in improved

Non-renovated strawberry bed.

root devel-

opment. Remove runners that have moved into the walkway or, if there are spaces that need to be filled, move some of the runners back into the plant row. It also provides for ample room between rows for walkways, with rows narrow enough to provide the ability to reach berries without stepping on the plants.

- Get rid of weeds. Weeds within and between the rows harbor insects such as the Tarnished plant bug – a destructive strawberry pest. Weeds reduce air flow for rapid drying after a rain or dew leading to an increase in foliar and berry diseases which results in a reduced marketable crop. Pickers, whether they are your pickers or pick-your-own customers, don't want to have to hunt through weeds for the plants or the berries. Ever seen a weedy strawberry field and wondered where, or even if, there are any viable plants in the mess, let alone marketable berries? Weeds will also out-compete the strawberry plant for valuable water and nutrients resulting in reduced yield. Flower bud formation is dependent on sunlight – weeds block valuable sunlight strawberry plants need

- Fertilizing. Give the plants a needed boost as they put on new growth and develop flower buds.
- Irrigation is very important if rain is lacking during this period to help move the nutrients into the plant, to promote new growth, to promote flower bud formation that occurs during the late summer and early fall, to maintain healthy plants and replace water lost during the heat of the summer.

If you didn't renovate your strawberries this year, I hope this information will make you pause and re-think that decision next year for healthier plants, higher yields and an increase in your profits.

Fungal leaf spot.

# Biodegradable

## PLASTIC BAGS

Targit Sales is proud to introduce our line of Biodegradable plastic bags. Our bags use a proprietary additive that renders the plastic ultimately biodegradable.

We are offering the Biodegradable bag program with all of our “Custom Imprinted” plastic bags. Our Biodegradable bags have the “EPI” (the additive company) logo on the bag as proof of its biodegradable properties.

Advertise your business along with a “tag line” to express your company’s efforts to keep your community and planet green.

Targit Sales can fully customize your bags to your specifications. We can make any size, strength, and style of bag to fit your needs. We can assist you with your design, setup, and artwork.

#### COMMON SIZES OF BAGS:

- 13 x 10 x 24 (Great for pies, cakes and corn)
- 12 x 8 x 24 (Great for your store front)
- 8 x 5 x 21 (Perfect size for tailgate markets)

#### BIODEGRADABLE PLASTIC BAG BENEFITS!

- \* Superior Strength!
- \* Less expensive to make and ship versus paper bags!
- \* Superior imprinting capability and quality...(looks better)!
- \* Easier and more affordable to store (inventory)!
- \* Flexibility! (customize the size, thickness, color and style to your specifications)
- \* Reusability!
- \* Biodegradable..breaks down quickly!

#### MOST COMMON QUESTIONS asked about biodegradable bags.

**Will the bags begin to break down while being stored?** No, the bags will retain its strength and integrity while properly stored. The breakdown only begins after it is directly exposed to certain environmental conditions such as: soil/landfill, heat/moisture, and sunlight.

**Is this process more expensive?** Not really, the cost increase is only a few percentage points higher. You will more than make this up with the goodwill you will be conveying to your community and customers.

**Does the bag lose its strength or feel...does it look different?** No, it is almost impossible to tell the difference between the Biodegradable bags and the traditional plastic bags. This is why we recommend putting a tag line on your printed biodegradable bags.

**Can these bags be recycled and/or reused?** Yes, these bags can be recycled and reused.
